

NEW ABSTRACT

An electronic equipment includes a housing which is formed by two housing parts of which one is integral with a retractable screen which may take up a first/closed position and a second/open position. The open position permits to see the whole screen. In the closed position, one part of the screen remains visible and the other part of the screen is hidden in a second part of the housing. This second housing part supports other elements of the equipment, such as a microphone and keyboard.
